

Database System Labs

- Project I:

Filesystem To DataBase II (Middle)

李旭东

leexudong@nankai.edu.cn

Nankai University

OBJECTIVES

- Store the info of file system to relational database
 - Do some operations on filesystem over DB

THE STRUCTURE INFORMATION OF FILE SYSTEM

```
tea
├── aclocal.m4
├── configure
├── configure.ac
├── doc
│   └── sqlite3.n
├── generic
│   └── tclsqlite3.c
├── license.terms
├── Makefile.in
├── pkgIndex.tcl.in
├── README
├── tclconfig
│   ├── install-sh
│   └── tcl.m4
└── win
    ├── makefile.vc
    ├── nmakehlp.c
    └── rules.vc

4 directories, 14 files
```

将/TEA/WIN移动至/TEA/DOC

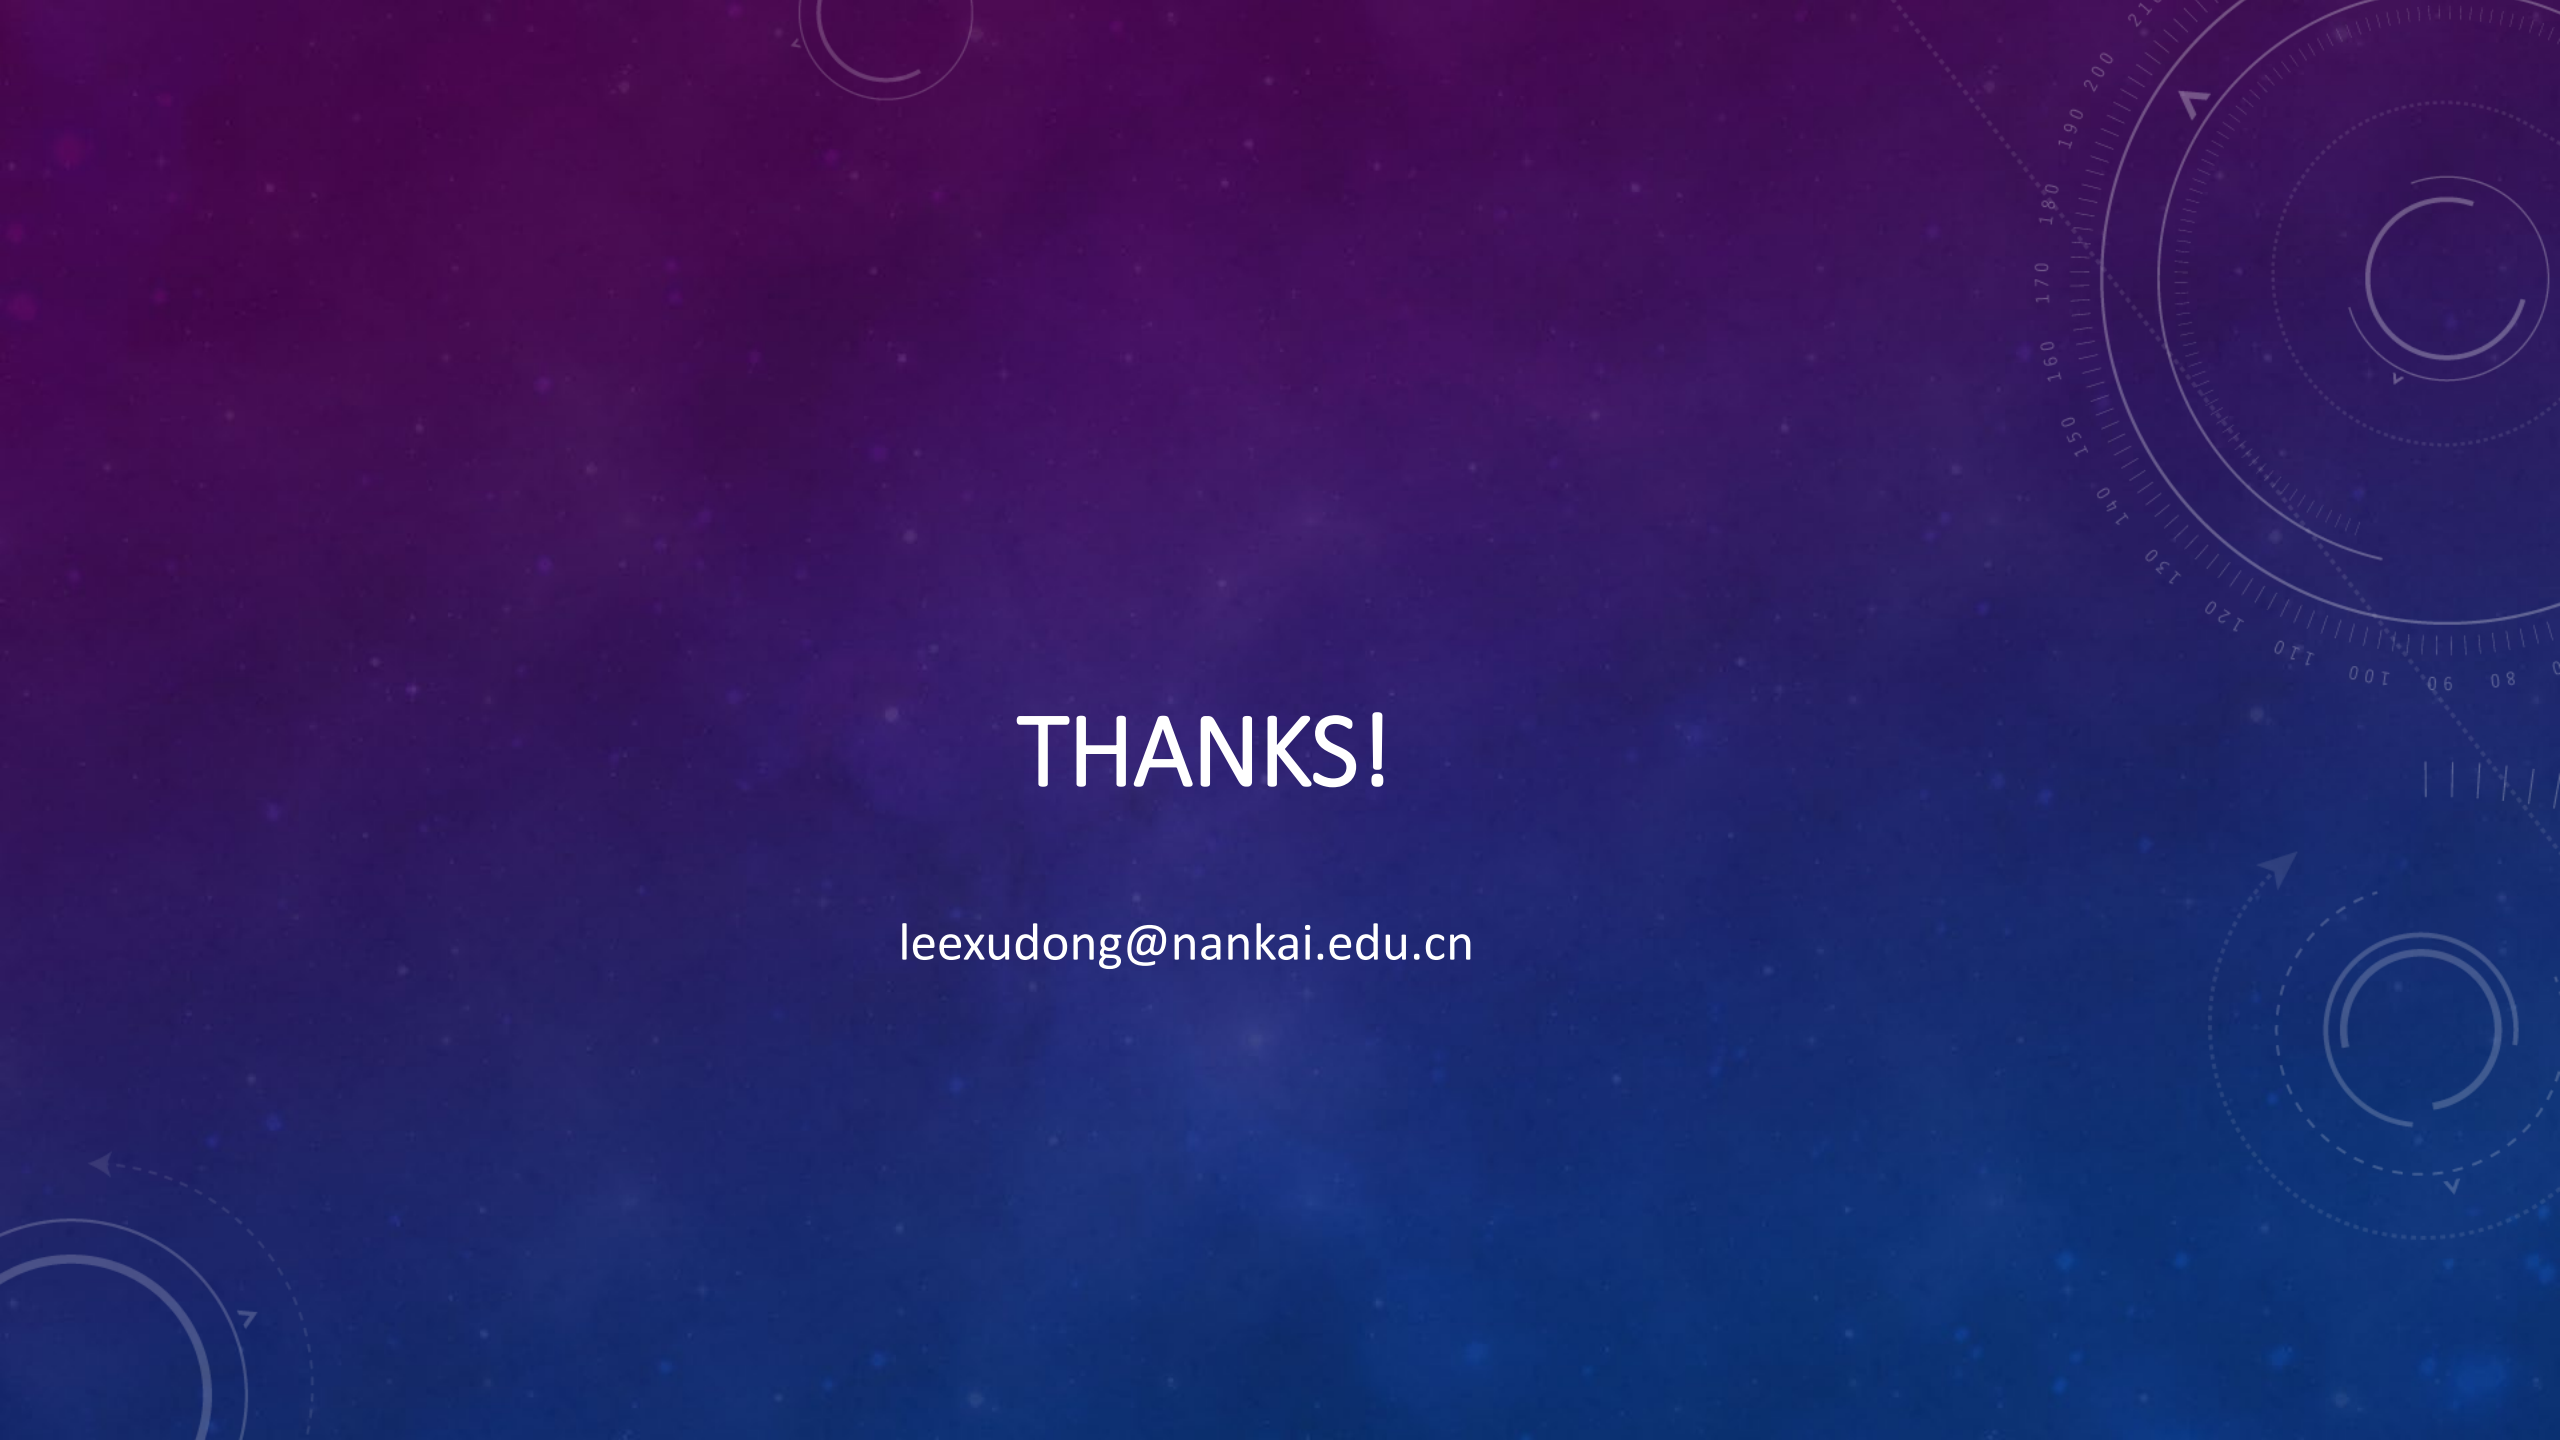

- delete from dir_dir
- where nextdir_id in
- (select dir_id from dir where dirname='win');
- insert into dir_dir
- select A.dir_id,B.dir_id
- from dir as A,dir as B
- where A.dirname='doc'and B.dirname='win';

```
sqlite-autoconf-3230100
----INSTALL

    ----pkgIndex.tcl.in
    ----tclconfig
        ----install-sh
        ----tcl.m4
```

QUIZ 1

DO SOME OPERATIONS ON FILESYSTEM OVER DB

- 1. rename file /tea/win/makefile.vc to /tea/win/mymakefile.vc
- 2. move /tea/win to /tea/doc
- 3. rename file /tea/doc/rules.vc to /tea/doc/myrules.vc
- 4. get the dir name which contains at least 2 files
- 5. delete /tea/tclconfig

THANKS!
